INFORMATION TECHNOLOGY

FACULTY OF COMMUNICATION AND INFORMATICS

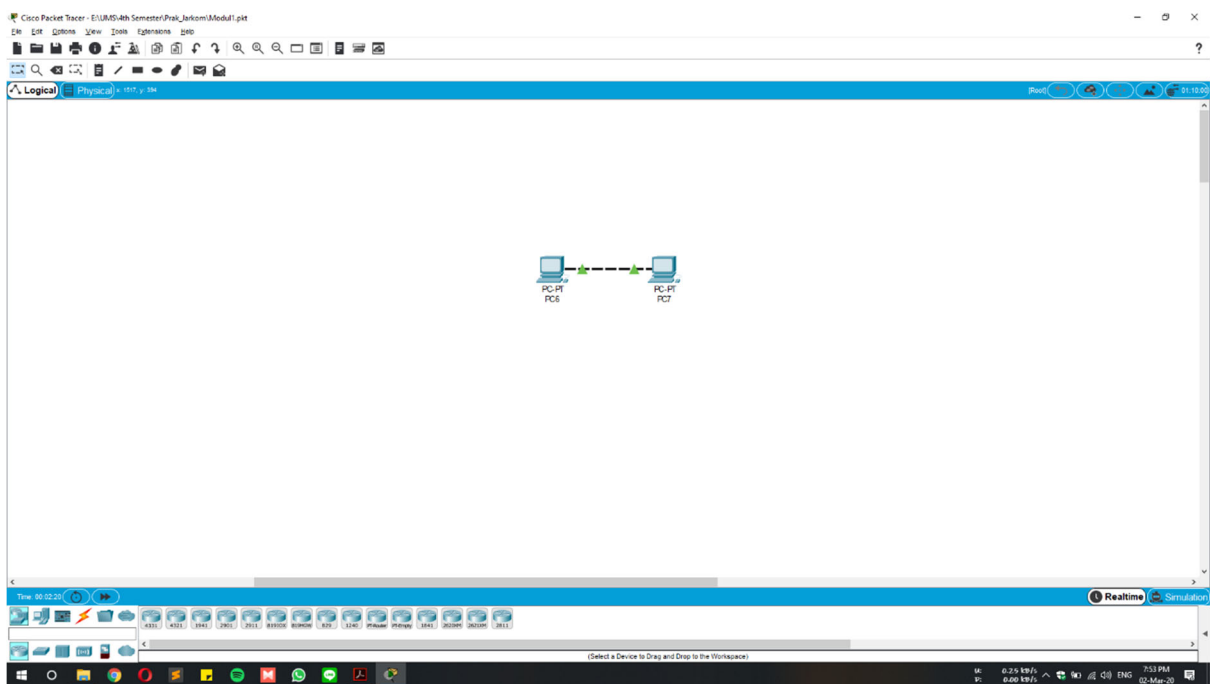

MUHAMMADIYAH UNIVERSITY OF SURAKARTA

#1

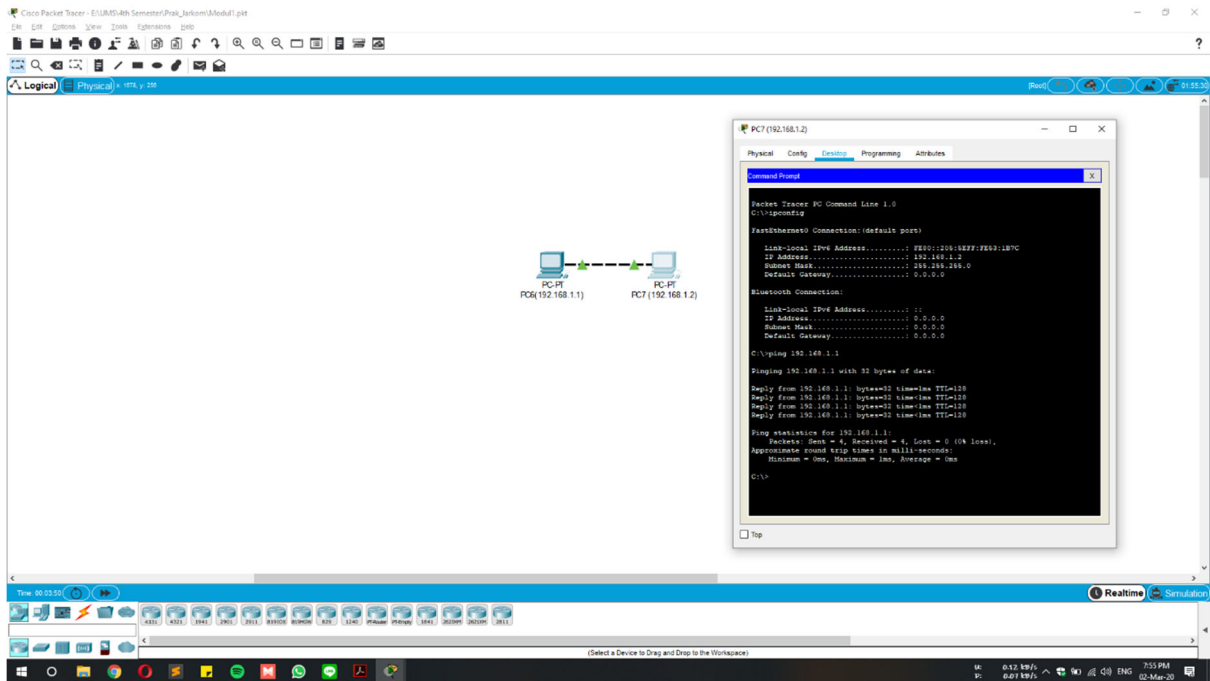

- Router0 and Router1 cant be connected at the moment, there is an error over there
- Between Router and Switch there is an error.
- The end devices (Server, Laptop, PC, Switch) can be connected each other.

#2 (Peer-to-Peer)

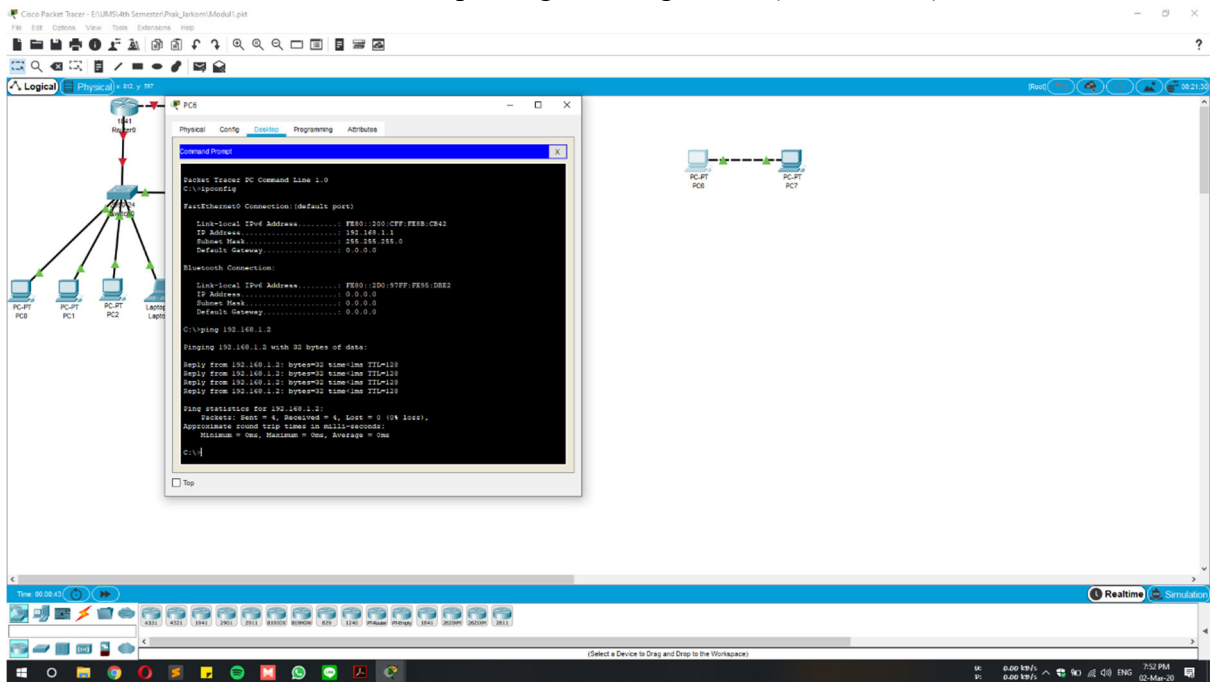

Pict 2. Peer-to-Peer 192.168.1.1 to 192.168.1.2

Give the IP Address = 192.168.1.1/24 at PC6 dan PC7 = 192.168.1.2/24

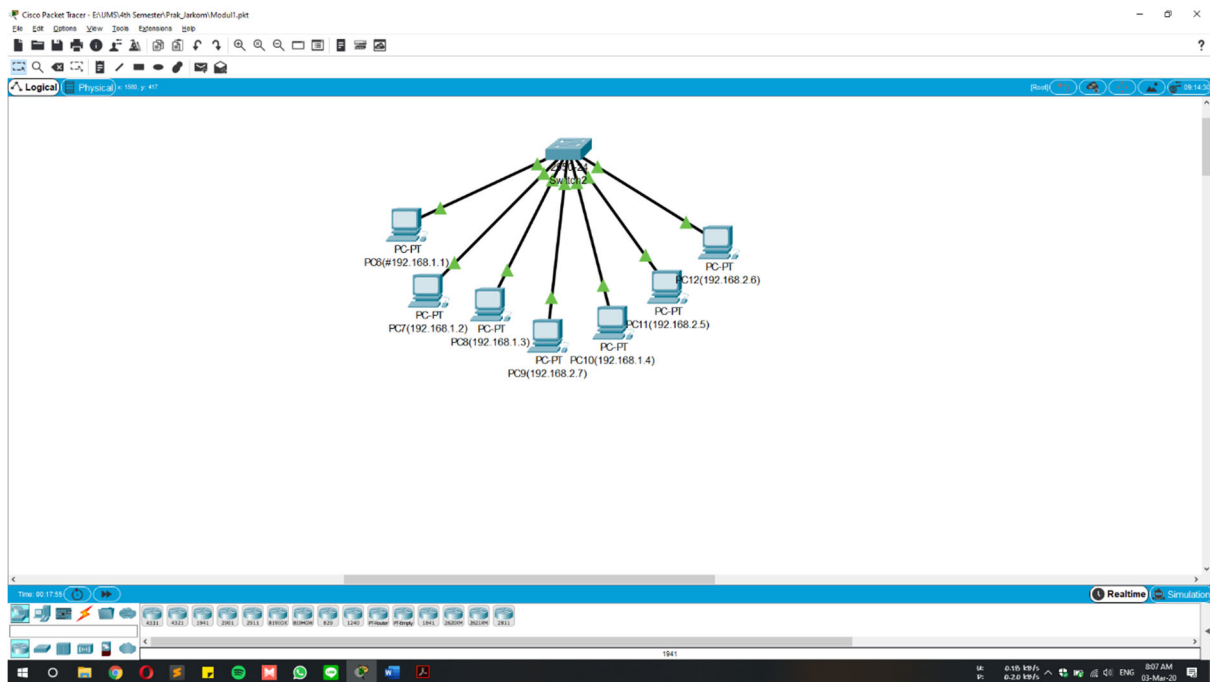

Pict 3. CMD Ipconfig and Ping at PC7(192.168.1.2)

Pict 4. CMD Ipconfig and Ping at PC6(192.168.1.1)

#3 (Create Switch Network)

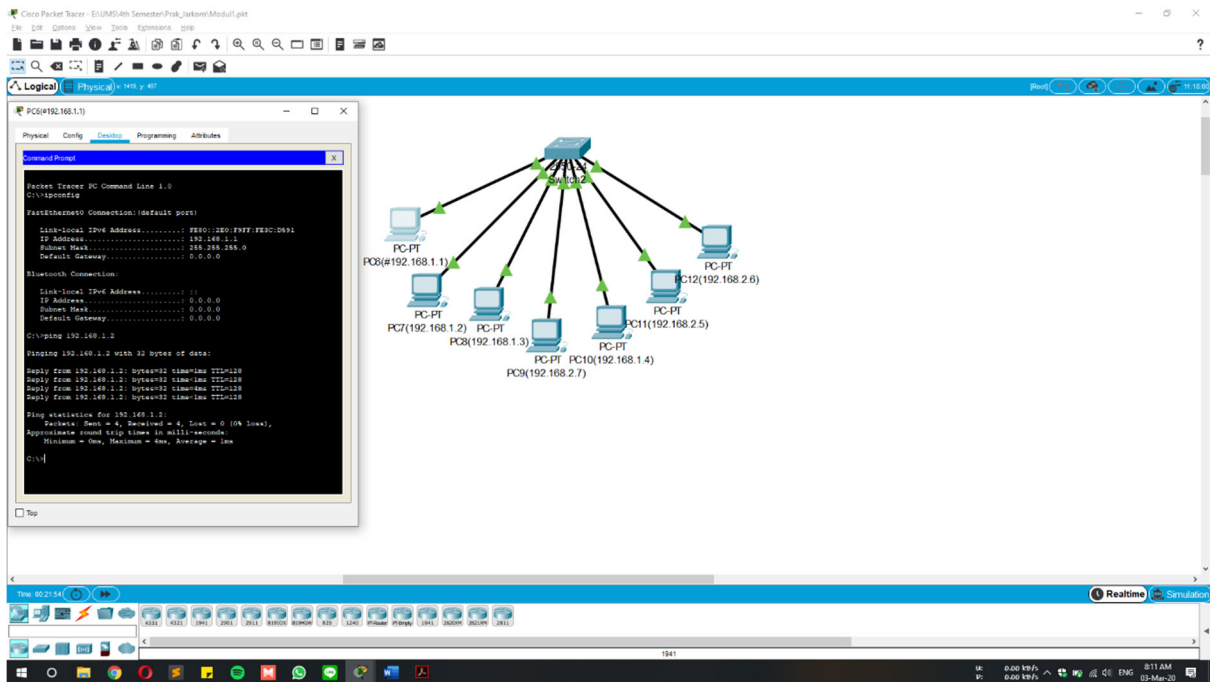

Pict 5. Switch Network

Create the Network Design as the pict above also the IP Address

PC6 = 192.168.1.1	PC10 = 192.168.1.4
PC7 = 192.168.1.2	PC11 = 192.168.2.5
PC8 = 192.168.1.3	PC12 = 192.168.2.6
PC9 = 192.168.2.7	

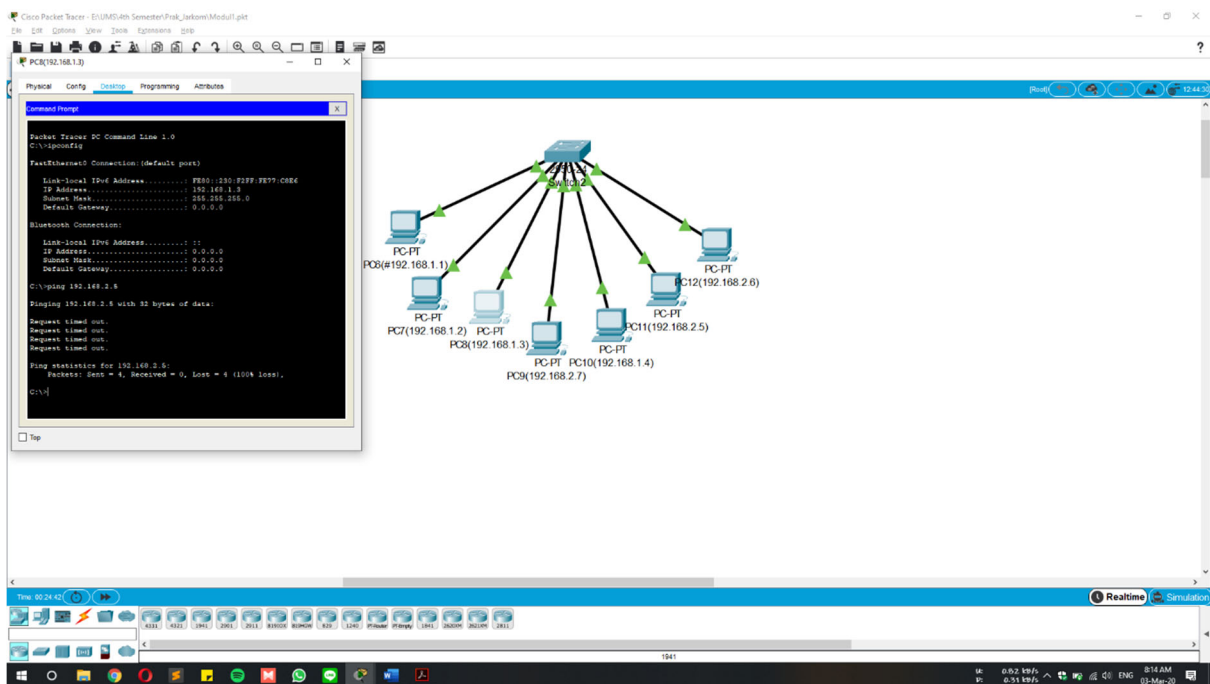

After the circuit is done do the following PING between :

- PC6 to PC7
- PC8 to PC11

Pict 6. PING PC6 to PC7

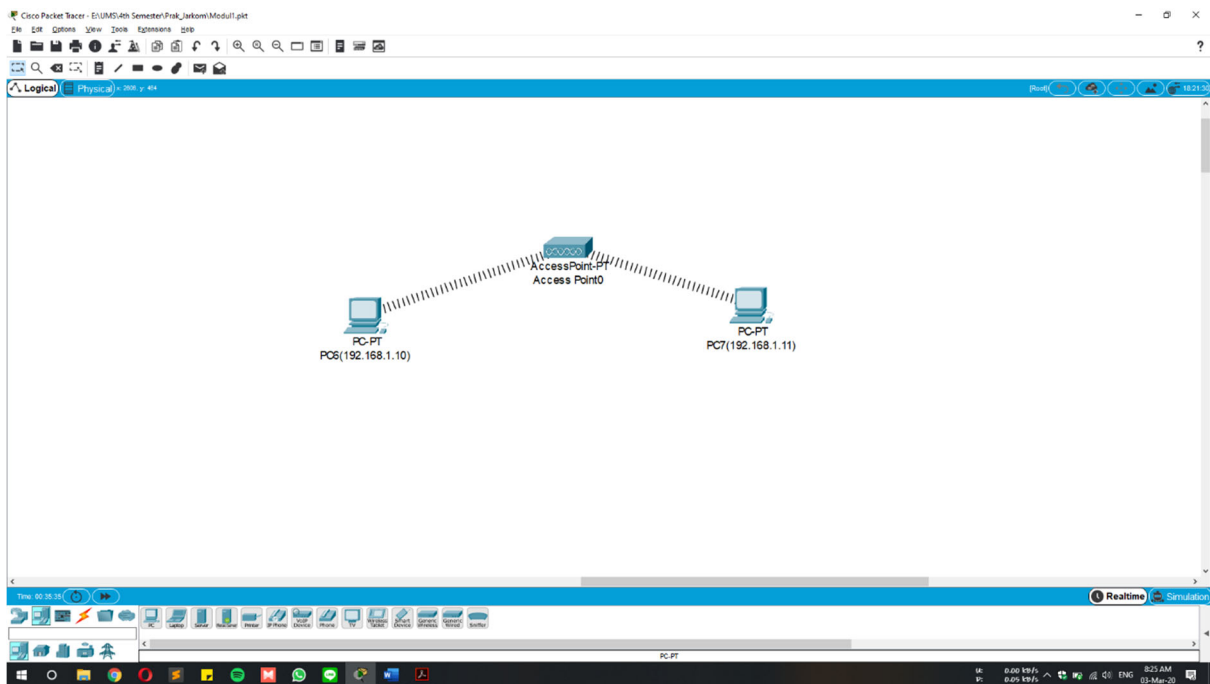

/* it's worked cause the network is the same between PC6 and PC7*/

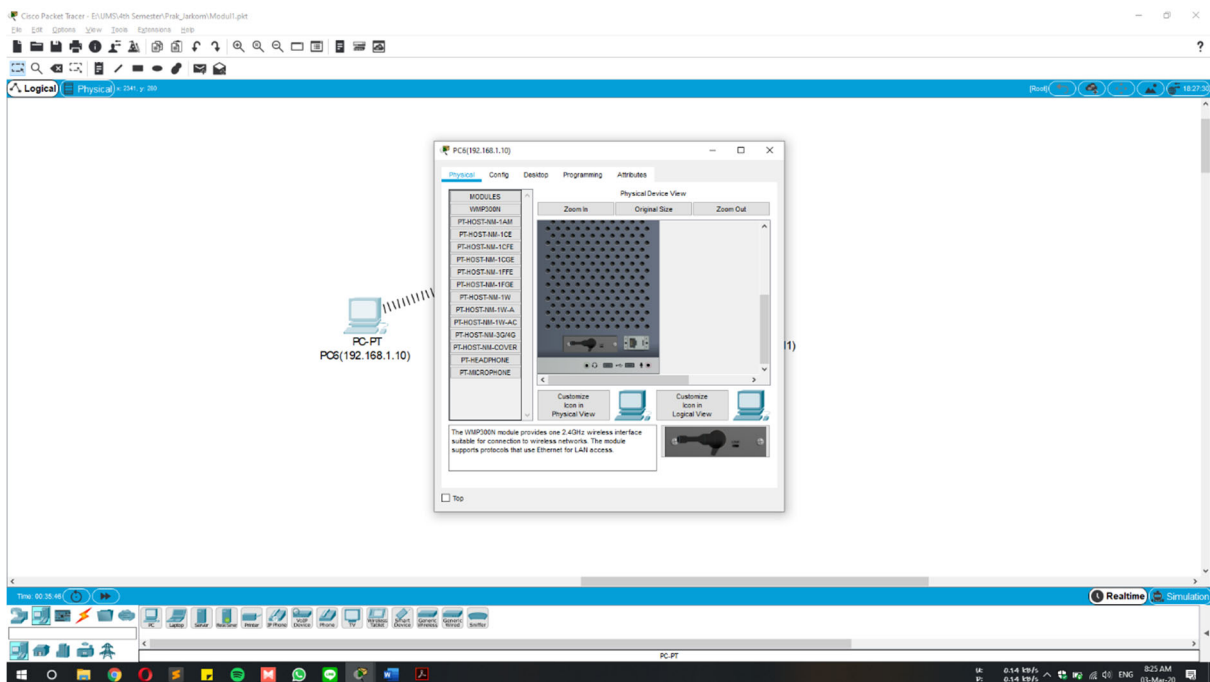

Pict 7. PING PC8 to PC11

/* It wont work cause the network is different */

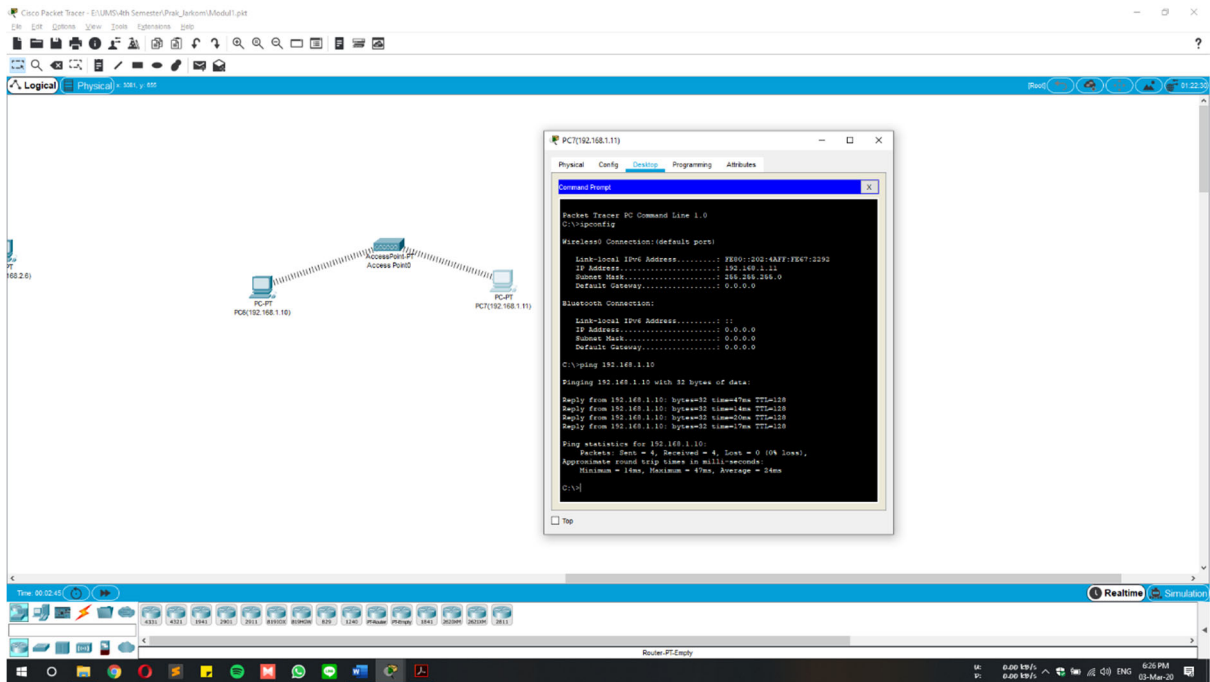

#4. Wireless

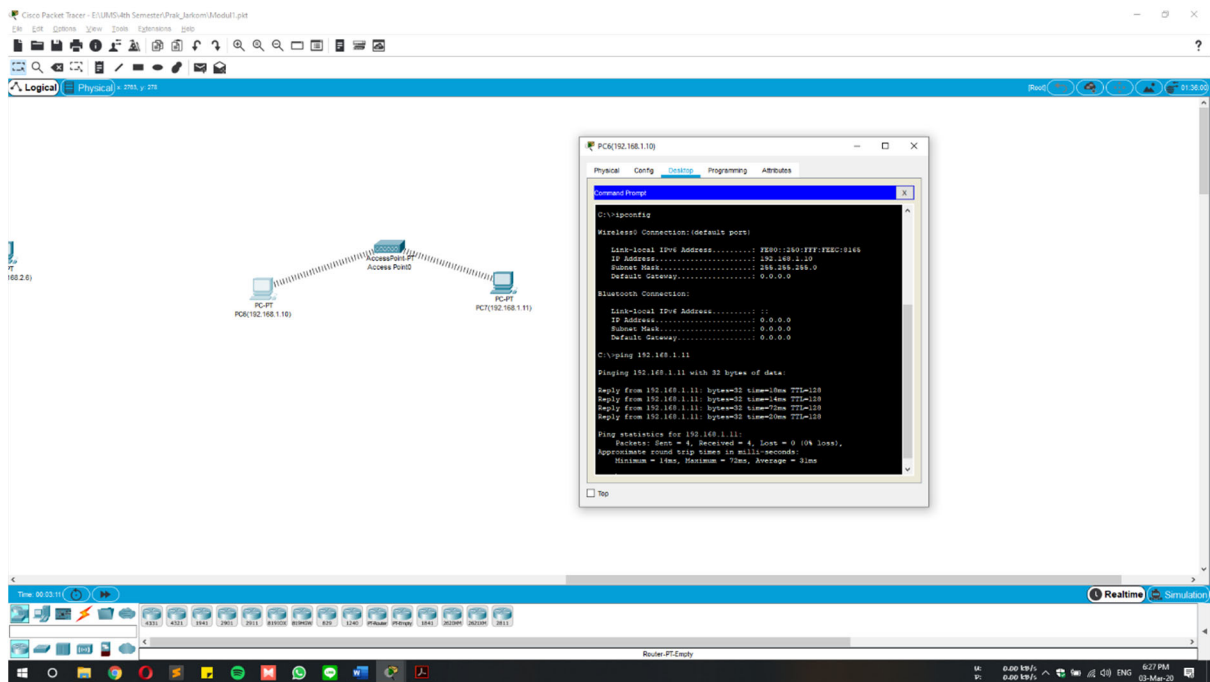

Pict 8. Design Network in Access Point (Wireless)

Pict 9. Change the Module into WMP300N (Wireless)

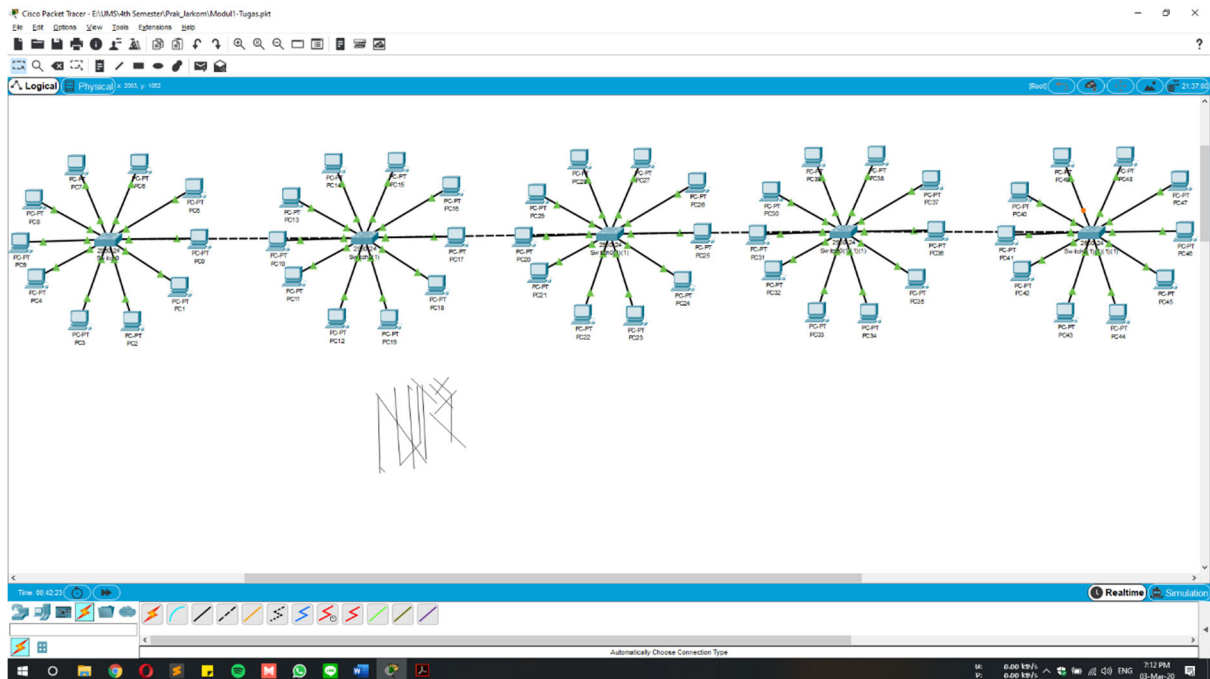

Pict 10. PING PC7 to PC6

Pict 11. PING PC6 to PC7

#Homework

Pict 11. The 5 Switch and 50 PC are connected each other

For the picture above the network is connected to each other and for some reason it aint gonna wreck it, and it works like a charm.

As you can see in the below picture there are some of PING from PC10 to PC34 and others.

#Attachments PING

Cisco Packet Tracer - E1UM54th Semester/Prak/Jarkom/Modul1-Tugas.pkt
